

Mastering Workflow

INTRODUCTION

- Workflow is the detailed execution of a business process, during which documents, information or tasks are passed from one participant to another for action, according to a set of procedural rules.
- Workflow Management is an essential component of business improvement initiative such as corporate re-engineering, business systems developments, e-commerce, e-government, quality management, compliance and business process improvement and management.
- In this training seminar, the participants will acquire the knowledge and skills to discover, define, and manage process workflow.
- Participants will learn the Business Process Modelling Notation (BPMN) method of workflow diagramming and modelling. This method is an open modelling standard that can be used to document workflow across a wide variety of industries. It can easily be understood by both business and technical people and is used by a number of leading workflow and modelling automation tools.
- The training seminar also provides a set of workflow design principles and measurement techniques that can be used to improve and manage workflow performance.

OBJECTIVES

The main objectives of this training course are as follows:

- Understand key workflow concepts
- Discover and define workflow in an organisation
- Define the scope of a business process workflow
- Objectively analyse process workflows
- Capture and model the details of an existing workflow
- Apply a set of best-practice principles to improve and automate workflows
- Implement workflow improvements

TRAINING METHODOLOGY

- State-of-the-art workflow modelling and improvement is transferred by means of short focused presentations which are followed by experiential learning programme sessions. In these sessions, the knowledge gained is applied to the real-world examples and case studies. Rapid learning of the methods and techniques is achieved by means of group work, individual work, participant discussion, facilitator interaction and constructive feedback.

ORGANISATIONAL IMPACT

- Enable a process-centric organisational culture
- Facilitate radical and continuous improvement in the organisation
- Accurately define the work of the organisation through the use of workflow models
- Contribute to the achievement of breakthrough organisational performance

PERSONAL IMPACT

- Objectively obtain the right information to develop workflow models
- Effectively apply best-practice workflow analysis, modelling and improvement techniques
- Confidently contribute to workflow improvement initiatives
- Be able to apply best-practice techniques to workflow design

WHO SHOULD ATTEND?

- This training course is designed for workflow analysts and designers, business staff, compliance staff, process owners, business and systems analysts, information technology professionals, quality specialists, workflow improvement project leaders and project team members.

Course Outline

Introduction to Workflow

- What is Workflow?
- The Importance of Workflow in an Organisation
- Workflow and Enterprise Architecture
- The Workflow Management Coalition (WfMC) Workflow Reference Model
- Discovering Workflow using Interviews, Workshops and Observation
- Documenting Workflow Scenarios
- A 6-Step Workflow Improvement Methodology
- Practical Discovery Work

Defining and Analysing Workflow

- The Components of a Business Process Workflow
- Establishing the Boundaries
- Identifying Workflow Levels
- Analysing Inputs, Flows, Decisions and Outputs
- Identifying Resources and Business Rules
- Measuring Workflow Performance
- Practical Analysis Work

Modelling Workflow using BPMN

- An Introduction to Developing Workflow Models using Business Process Modelling Notation (BPMN)
- Modelling the Core Model Elements
- Activities, Flows, Events and Decisions
- Extended Workflow Modelling Notations
- Workflow Patterns
- Modelling Collaborative Workflow
- Practical Workflow Modelling Work

Improving Workflow

- Identifying Improvement Opportunities
- Workflow Design Principles
- Moving from As-Is to To-Be Models
- Describing Improvements using Workflow Models
- Practical Workflow Improvement
- Simulating Workflow

Implementing and Automating Workflow

- Implementing Improved Workflow
- Getting Support for Your Improvement Initiatives
- The Nine Critical Success Factors
- Understanding Automated Workflow
- Moving from the Workflow Model to Automated Workflow
- The Future of Automated Workflow
- Monitoring and Managing Workflow
